

Hands-on: k-NN Regression in Shiny

Overview

In this 30 min session you will:

- Launch and explore the k-NN Shiny app
 - Adjust **k**, select backend (R vs C++)
 - Observe train/test performance and parity plots
-

Setup

Download the Shiny app:

```
curl -O https://raw.githubusercontent.com/mmadoiat/WSoRT/refs/heads/main/R/app.R
```

Launch the App

```
# Run the Shiny application  
shiny::runApp('app.R')
```

Tasks

1. Change the train/test split ratio in `make_split()` (e.g. 80/20).
2. Add a slider input for the split ratio in `ui` and update server logic.
3. Extend the performance panel to show Mean Absolute Error (MAE).
