Hands-on: k-NN Regression in Shiny

Overview
In this 30 min session you will:
• Launch and explore the k-NN Shiny app
• Adjust \mathbf{k} , select backend (R vs C++)
• Observe train/test performance and parity plots
Setup
Download the Shiny app:
$\verb curl -0 https://raw.githubusercontent.com/mmadoliat/WSoRT/refs/heads/main/R/app.leads/main/R/app.R/$
Launch the App
Run the Shiny application shiny::runApp('app.R')

Tasks

- 1. Change the train/test split ratio in make_split() (e.g. 80/20).
- 2. Add a slider input for the split ratio in ui and update server logic.
- 3. Extend the performance panel to show Mean Absolute Error (MAE).
